Navigating DBS Digibank: A Comprehensive Technical and UX Evaluation of Retail and Wealth Management Platforms

The digital banking ecosystem of DBS Bank, encompassing both standard retail banking and DBS Treasures wealth management, is split across two primary access channels: the web-based "digibank Online" (formerly known as iBanking) and the mobile-native "digibank mobile"[1]. While sharing a core transactional and security infrastructure, these platforms are optimized for different user contexts. The desktop web interface focuses on comprehensive, data-rich analysis and administrative setup, whereas the mobile application prioritizes biometrically secured, on-the-go execution and simplified navigation[2].

Architectural Overview and Navigation Frameworks

The core design philosophy of the DBS digital environment balances functional density with user-defined simplicity. To accommodate users with differing technical aptitudes, the mobile application provides two distinct operational interfaces: Full Mode and Simple Mode[4].

```
|                          +------------------------+ |
+-------------------------------------------------------------+
|  Bottom Navigation Bar:                                     |
|  [Home]      [Pay & Transfer]      [Invest]      [More]     |
+-------------------------------------------------------------+
```

Standard Digibank Mobile Layout (Full vs. Simple Mode)

The standard mobile application layout is built around a persistent bottom navigation bar containing four primary anchors: Home, Pay & Transfer, Invest, and More[6].

Full Mode Interface

When logged into Full Mode, the homepage displays a consolidated view of the user's net wealth, itemized by deposit accounts, cards, and outstanding loans[1]. It features contextual "Intelligent Banking" widgets that dynamically surface personalized spending observations, transaction alerts, and promotional bundles[9]. The top-left corner holds the side menu icon (hamburger) or profile icon, while the top-right corner features notification and search utilities[10]. The center workspace prominently features the total aggregated account balance, which includes a "view/hide" eye toggle to mask sensitive numbers in public environments[2].

Simple Mode Interface

Designed to lower cognitive load, Simple Mode replaces the multi-layered dashboard with a grid of up to six large, high-contrast shortcut tiles corresponding to the user's most frequent tasks[5]. This layout strips away balances, marketing banners, and complex navigation structures to highlight basic transactional tools[5].

To activate and personalize Simple Mode on a mobile device, a user must go through a structured interface flow:

1. **Authentication:** The user logs into the mobile application using biometric recognition (Touch ID, Face ID, or fingerprint) or an alphanumeric User ID and PIN[4].
2. **Navigation to Setup:** From the default Full Mode homepage, the user taps the **Quick Links** option or navigates to the **More** tab at the bottom right, selecting **Personalise Your App**[4].
3. **Selection of Mode:** The user selects the **Simple Mode** option from the personalization menu[4].
4. **Customization Grid:** The screen displays a library of available functional widgets (e.g., PayNow, Scan & Pay, Local Transfer, Bill Payment)[5]. The user selects up to six preferred features[5].
5. **Reordering:** Using a drag-and-drop grid interface, the user can tap, hold, and drag the tiles to rearrange them in their preferred visual order[4].
6. **Verification and Saving:** The user taps the back button to preview the changes, then taps **Save** to apply the layout to their device profile[4].

Standard Digibank Online Layout (Web)

The desktop web interface is optimized for large displays and horizontal, multi-column navigation[2]. The layout consists of a vertical left-hand navigation panel and a main central dashboard[2].

- **Left-Hand Navigation Panel:** This persistent menu contains the main administrative nodes: **Home**, **Pay & Transfer**, **Cards**, **Investments**, **Insurance**, and **Preferences**[2].
- **Central Dashboard:** This section displays the user's primary deposit and savings accounts in one view[2]. It features customizable modules that let users change font sizes and hide account balances for privacy[2].
- **Interactive Self-Help Portal:** The web interface integrates directly with DBS Digibot, a conversational agent accessible via a floating chat icon at the bottom right of the screen[1].

DBS Treasures and Wealth (iWealth) Digital Layout

For high-net-worth clients holding a Wealth Management Account (WMA) with investible assets of $350,000 or more, the standard interface transitions into a specialized wealth management portal, historically designated as DBS iWealth[3]. The design shifts from simple transactional monitoring to holistic asset management[3].

The layout adapts to highlight portfolio metrics:

- **Consolidated Portfolio View:** The home screen presents a unified view of global investible assets, keeping investment portfolios separated from everyday savings and expenses[13]. This dashboard calculates net asset movements, displaying realized and unrealized profit and loss (P&L) in real time across multiple foreign currencies[3].
- **Asset Categorization Toggle:** Portfolios are organized into two structural formats[15]:

1. *Asset Type Layout:* Groups holdings by financial product classification (e.g., Equities, Unit Trusts, Exchange Traded Funds, Bonds, Structured Products, Cryptocurrency)[3].
2. *Asset Class Layout:* Reclassifies products based on the DBS Chief Investment Office (CIO) asset allocation framework, projecting diversified exposures (e.g., Fixed Income, Cash/Liquidity, Growth Equities) to help users align their accounts with institutional investment guidance[15].

- **Relationship Manager Access Node:** Tapping a persistent question mark (?) or chat icon in the upper-right corner opens a dedicated workspace, where the assigned Relationship Manager's name, profile, and secure contact channels are shown on the left pane[16].

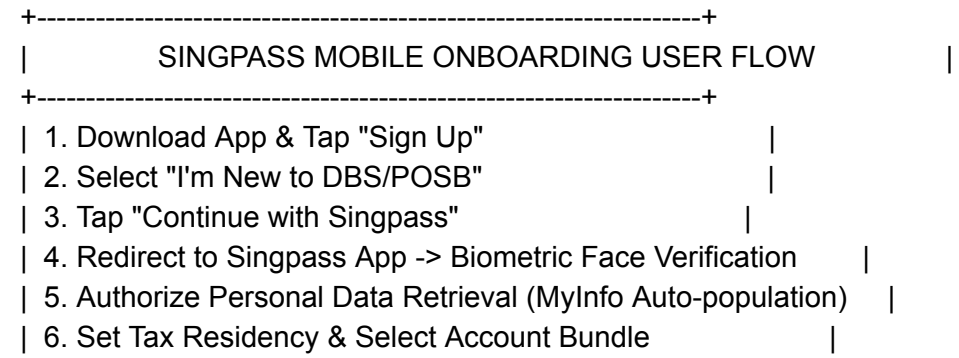

The following table summarizes the structural and functional differences between the standard retail digital banking platforms and the DBS Treasures/iWealth wealth management platforms[2].

Platform Dimension	Standard Retail (digibank)	DBS Treasures / iWealth
Minimum Asset Threshold	No minimum threshold (accessible to all depositors)[2]	S$350,000 in investible assets[3]

Primary Dashboard Interface	Aggregated checking, savings, and card balances[2]	Unified portfolio view showing global assets, gains/losses, and currencies[13]
Asset Categorization	Product-based grouping (e.g., standard savings/current accounts)[2]	Two-way toggle: Product Type or CIO Asset Class Allocation Framework[15]
Investment Product Suite	Retail funds, basic equities, and gold/SRS accounts[2]	Equities across 8 markets, mutual funds, crypto, and structured products[3]
Direct Advisory Integration	Standard customer service/help desk routing[2]	Persistent Relationship Manager (RM) secure messaging and call node[16]
Mobile Customization Modes	Simple Mode (up to 6 core task tiles)[5]	Custom FX alerts, portfolio stress-testing, and RM Exchange portals[11]

Onboarding, Identity Verification, and Cryptographic Security

To comply with regional anti-money laundering and know-your-customer guidelines, DBS uses automated identity checks and hardware-free cryptographic signatures to secure access while lowering onboarding barriers[20].

```
| 7. Create Alphanumeric Digibank User ID and PIN                |
| 8. Confirm App Registration -> Launch Digital Token Setup      |
+----------------------------------------------------------------+
```

Account Opening and Identity Verification Flow

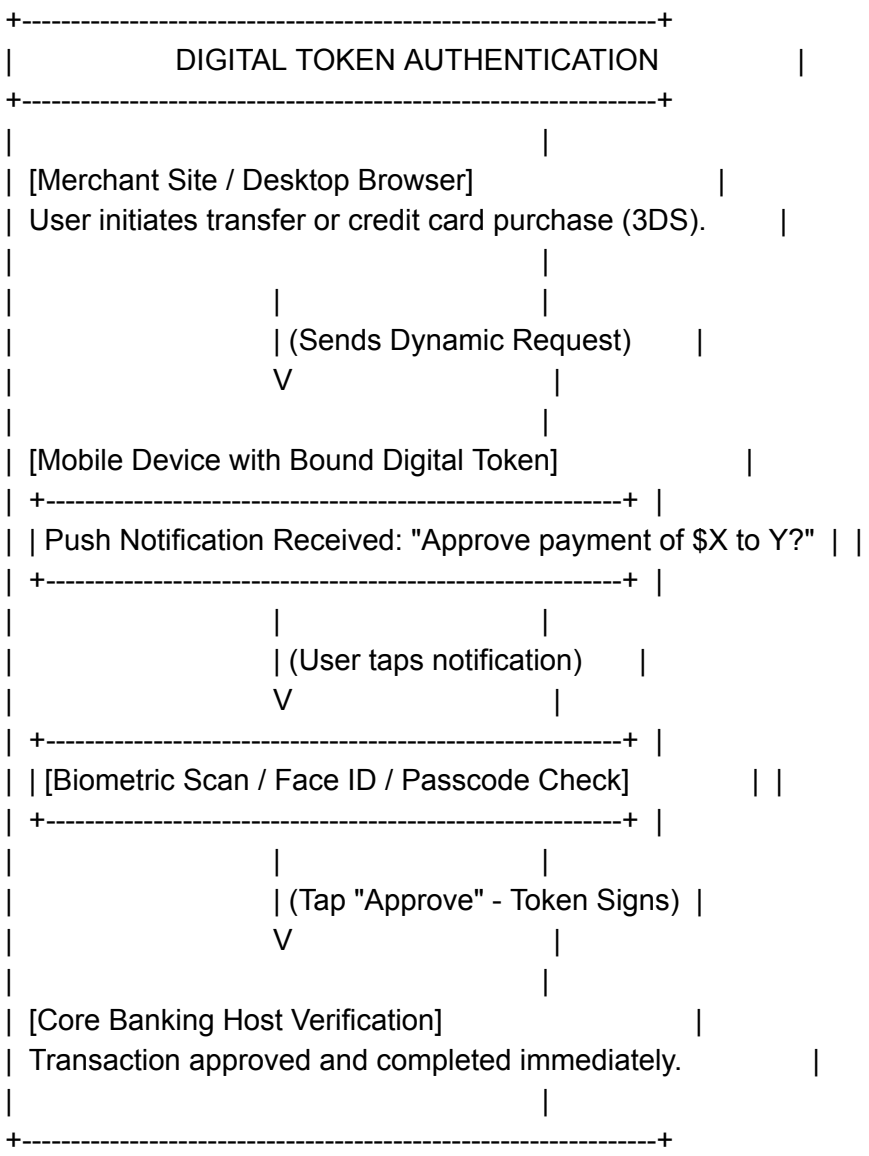

For prospective customers residing in Singapore, digital onboarding is completed through integration with the government's Singpass database[21].

User Flow: Account Opening with Singpass (Mobile App)

1. **Initial Access:** The user downloads the **digibank mobile** app from the official application store[21].
2. **Onboarding Type Selection:** Upon launching the app, the user taps **Sign up for digibank** and selects **I'm New to DBS/POSB**[21].
3. **Singpass Authentication:** The user selects **Continue with Singpass**[21]. The system redirects the user to the Singpass mobile application[21]. The user completes a biometric facial scan or enters their passcode[22].
4. **MyInfo Data Consent:** The user reviews the personal data requested by the bank (including full name, identity card numbers, residential address, nationality, and birth date) and taps **I Agree** to authorize transmission[21].
5. **Form Auto-population:** The user is redirected back to the bank's app, where the onboarding forms are populated with their verified identity details[21].
6. **Supplemental Fields:** The user inputs additional details, such as occupation, industry classification, and monthly income[21].
7. **Tax Residency Declaration:** The user declares their tax status[21]. If they have foreign tax obligations, they enter the corresponding countries and Tax Identification Numbers[21].
8. **Product Selection:** The user selects an account bundle (typically a multi-currency account coupled with a debit card)[21].
9. **Credential Creation:** The user sets their unique digibank credentials by inputting an alphanumeric User ID (8 to 12 characters) and a secure PIN (8 to 30 characters containing uppercase, lowercase, and numeric components)[21].
10. **Confirmation:** The user reviews the details and taps **Confirm Application**[21]. Singpass applications are processed immediately, whereas applications without Singpass require manual document uploads and take up to three working days for review[21].

Security Architecture: DBS Digital Token Setup

The software-based **DBS Digital Token** serves as the primary cryptographic authenticator for both mobile and web transactions, replacing physical security tokens and SMS-delivered One-Time Passwords (OTPs)[20]. It runs natively within the mobile application, using device binding and local hardware security modules (such as Secure Enclave or TrustZone) to authorize transactions securely[20]. For security, only one mobile device can hold an active Digital Token for a customer profile at any given time[20].

User Flow: First-Time Digital Token Activation (New or Migrated Device)

1. **Login Challenge:** The user downloads the app onto their mobile device, logs in using their User ID and PIN, and is prompted to register their biometric details (Touch ID/Face ID)[1].
2. **Initial Security Warning:** The system detects the absence of a localized cryptographic token key and prompts: **Set up Digital Token**[24].

3. **Activation Command:** The user taps **Set up now**[20]. If they do not have a registered email on record, they can tap **My physical token is damaged/lost** to request a physical registration code via postal mail[20].
4. **Verification Step:** If activating via standard mobile channels, the bank transmits a six-digit SMS OTP to the registered mobile number[20]. The user enters this OTP into the input field[25].
5. **Secondary Authentication Challenge:** To verify identity, the user completes an additional step, such as Singpass Face Verification or entering their debit/credit card PIN[2].
6. **Hardware Key Binding:** The application generates a unique cryptographic key pair, storing the private key inside the device's hardware security module[20]. This registers the new device as the single active transactional authenticator and automatically deactivates any digital token linked to previous devices[20].

User Flow: Authorizing External Web Transactions (3D Secure Card Payments)

1. **Initiation:** The user enters their credit or debit card details on a merchant website that supports 3D Secure verification[24].
2. **Push Notification:** The bank's authorization engine triggers a secure push notification to the user's registered mobile device[24].
3. **Alternative Access Path:** If the push notification is delayed due to poor network coverage, the user manually launches the **digibank mobile** app and taps the **Digital Token** icon displayed on the pre-login page (which does not require logging into the app)[20].
4. **Data Verification:** The app displays the transactional payload: the merchant's name, payment amount, and source card number[27].
5. **Approval:** The user verifies the details and taps **Approve** (or **Tap to approve**)[24].
6. **Biometric Validation:** The phone prompts for a biometric scan (Face ID or fingerprint) or the device's passcode[20].
7. **Cryptographic Signing:** Once validated, the digital token securely signs the transaction in the background, completing the merchant payment immediately[20].

Standard Daily Banking Operations and Transactional Flows

DBS coordinates daily transactional services through localized interbank networks, unified merchant billing databases, and flexible limit management[25].

Checking Account Balances and Transaction History

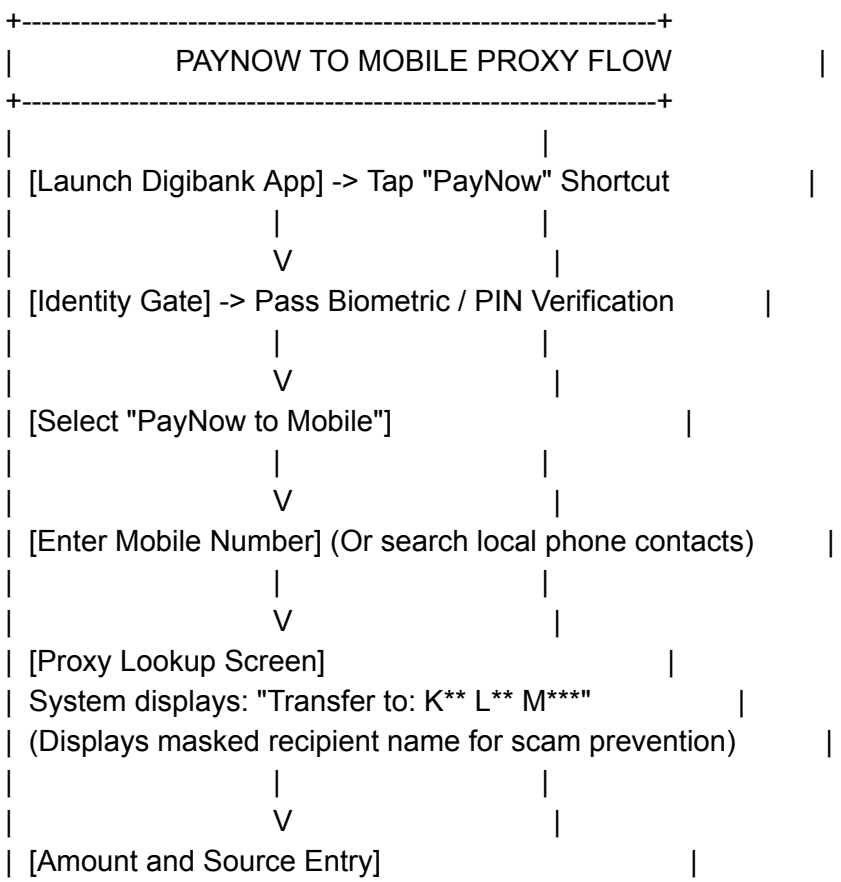

Balance Verification Channels

To accommodate different usage scenarios, DBS supports balance inquiries through four main channels[1]:

- **Standard Mobile Balance Inquiry:** The user opens the **digibank mobile** app, authenticates using biometric ID or their User ID and PIN, and views their consolidated

balance card on the home screen[1].

- **Peek Balance (Authentication-Free):** Once set up, the user can check their balance without logging in[1]. To configure this, the user navigates to **More** -> **App & Security Settings** -> **Peek Balance**, and toggles **Activate**[1]. On the pre-login screen, tapping and holding the designated area reveals the balance immediately[1].
- **Digibot (Conversational AI):** On the web or mobile app, the user taps the floating chat icon at the bottom right[1]. They type "Account Balance" into the text field and click **Authenticate me** to log in[1]. The user can select their account to view three balance categories: *Available Balance* (immediately usable funds), *Ledger Balance* (the book balance including pending clearance), and *Hold Balance* (representing cheques undergoing standard one-day or half-day clearance processes)[1].
- **Standard Web Balance Inquiry:** The user logs into **digibank Online**, completes multi-factor authentication, and navigates to **Home** -> **Deposits** to view their detailed balances[1].

```
|  - Input transfer sum ($SGD)                                  |
|  - Select debiting savings/multiplier account                 |
|                          |                          |
|                          V                          |
|  [Review Screen] -> Verify masked recipient name & debit sum  |
|                          |                          |
|                          V                          |
|  [Execution] -> Tap "Transfer Now" -> Real-time settlement    |
|                                     |
+-------------------------------------------------------------+
```

Checking and Exporting Transaction History

Users can view and download their transaction history via both web and mobile channels[12].

- **Mobile App History:** After logging in, the user taps **Deposits** under the Home tab and selects their account[12]. Scrolling down reveals the past six months of activity, sorted into *Cleared*, *Pending*, and *Declined* tabs[12]. To download, the user taps the **Download** arrow icon at the top right to generate a shareable PDF[12].
- **Web Portal History:** After logging in and authenticating on digibank Online, the user navigates to **Home** -> **Deposits** and selects their account[12]. The screen displays transaction history up to the past six months, which can be filtered by date range or transaction type[12]. To export, the user clicks the top-right download icon[12]. For statements older than six months, users can access their digital archives via **Manage eStatements and eAdvice**[2].

PayNow Registry and Fund Transfers

PayNow is Singapore's instant interbank peer-to-peer fund transfer service[25]. It links bank accounts to unique personal proxies like NRIC/FIN numbers, mobile numbers, Company Unique Entity Numbers (UENs), or Virtual Payment Addresses (VPAs)[25].

User Flow: Transferring Funds via Mobile Proxy

1. **Shortcut Access:** From the **digibank mobile** pre-login screen, the user taps the **PayNow** icon[25].
2. **Login Challenge:** The app prompts the user to authenticate using biometric validation (Touch ID/Face ID) or their alphanumeric User ID and PIN[25].
3. **Recipient Identifier Entry:** The user taps **PayNow to Mobile** and enters the recipient's mobile number, or selects a contact directly from their phone directory[25].
4. **Scam-Prevention Lookup:** The core network queries the recipient's proxy database[32]. The app displays a confirmation screen showing a partially masked version of the recipient's registered name (e.g., M**** S*** L) to prevent impersonation scams[25].
5. **debit Account and Amount Selection:** The user selects their source debit account and enters the transfer amount in SGD[33].

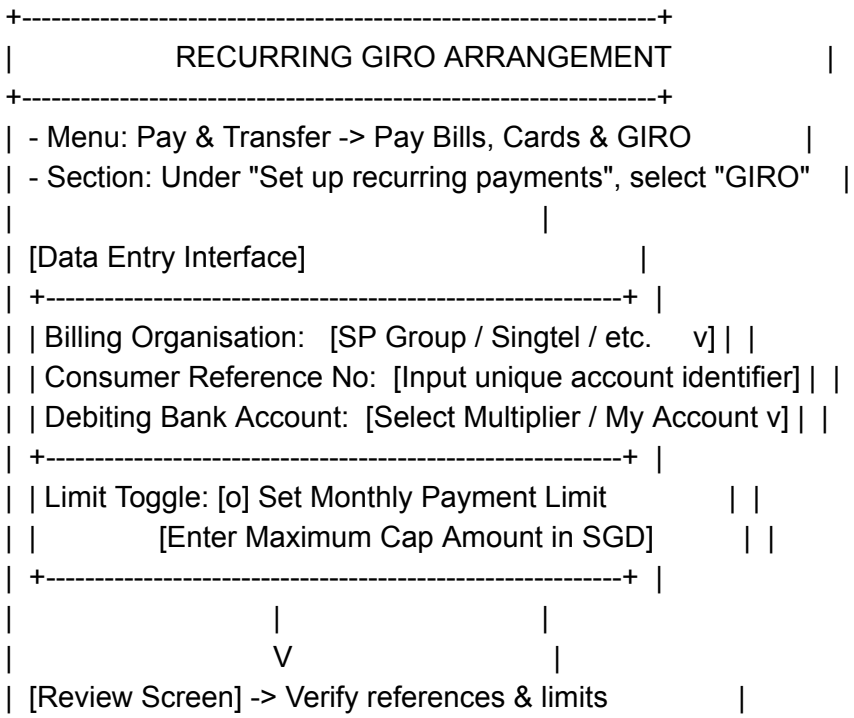

6. **Review and Confirmation:** The user reviews the details and taps **Next**[33].
7. **Final Settlement:** Tapping **Transfer Now** executes the transaction[25]. Settlement is immediate, and transaction notifications are sent via email, SMS, or push alerts[33].

User Flow: Paying Merchants with Scan & Pay

1. **Scanner Activation:** From the mobile application's home screen or pre-login panel, the user taps **Scan & Pay**[25].
2. **Visual QR Capture:** The app activates the device's camera. The user frames the merchant's SGQR, PayNow QR, or cross-border payment code (such as QRIS codes in Thailand or Malaysia)[25].
3. **Authentication:** The user logs in to authorize the payment[25].
4. **Amount Input:** If the QR code does not contain a preset pricing payload, the user enters the exact transaction amount[25].
5. **Confirmation:** The user verifies the merchant's payment details and taps **Transfer Now**[25]. The system processes the payment instantly and displays a success screen[25].

Bill Payments, Card Bills, and Recurring Direct Debits (GIRO)

The payment framework connects users with over 180 registered billing organizations, utilities, card issuers, and government institutions[29].

```
|                          |                          |
|                          V |
|  [Authorize] -> Click "Submit" to activate direct debit        |
+-----------------------------------------------------------------+
```

User Flow: Executing a One-Time Card Bill Payment (Web Portal)

1. **Navigation:** The user logs into **digibank Online** and authenticates[36].
2. **Menu Access:** From the left-hand navigation panel, the user clicks **Pay & Transfer** and selects **Bills, Cards & GIRO**[36].
3. **Card Selection:** Under the Credit Cards section, the user selects their credit card from the list of registered payees[36]. If the card is not registered, they click **Add Other Bank's Credit Cards Recipient** and input the 16-digit card number and issuer details[36].
4. **Debit Account and Amount Entry:** The user selects their source bank account and chooses a payment amount option: *Pay Outstanding Balance*, *Pay Minimum Due*, or *Pay Other Amount*[37].
5. **Confirmation:** The user clicks **Next** to review the payment summary[37].
6. **Authorization:** Tapping **Pay bills now** completes the transaction[37]. Payments to DBS or POSB cards credit immediately; payments to other banks take up to three business days to clear[36].

User Flow: Setting up a Recurring GIRO Mandate (Mobile App)

1. **Access Path:** The user logs into **digibank mobile** and navigates to the **Pay & Transfer** tab[35].
2. **Setup Option:** The user selects **Pay bills & cards** and scrolls down to **Set up recurring payments**, choosing **by GIRO**[35].
3. **Form Input:** The user selects the billing organization and enters their consumer reference number[35].
4. **Source Selection:** The user selects their source current or savings account[35].
5. **Payment Limit Guardrail:** The user can set a monthly payment limit to protect against unexpected utility spikes or billing errors[35]. Toggling this off allows unlimited monthly direct debits[35].
6. **Submission:** The user taps **Next**, reviews the direct debit mandate details, and taps **Submit**[35]. The app registers the mandate and initiates direct debits from the next billing cycle[35].

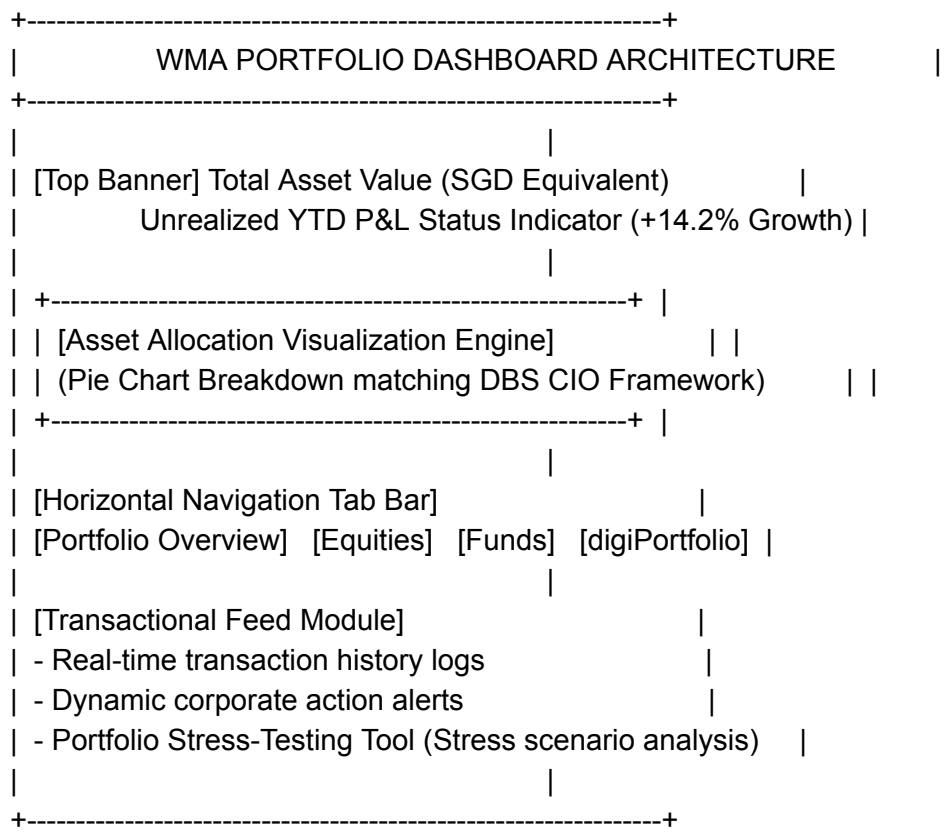

User Flow: Paying Bills with AXS via DBS PayLah!

1. **Launch:** The user opens the **DBS PayLah!** lifestyle application[29].
2. **Integration Node:** From the dashboard's service grid, the user taps the **AXS icon** to open the integrated AXS billing system[29].
3. **Biller Selection:** The user selects **Pay Bills** and chooses their bill type (e.g., government taxes, tuition fees, or condo maintenance)[29].

4. **Account Validation:** The user inputs their account reference numbers and billing values[29].
5. **Authorization:** The user taps **Pay with DBS PayLah!** to complete the payment[29]. Bill payments made before 4:55 PM on weekdays credit on the next business day[37].

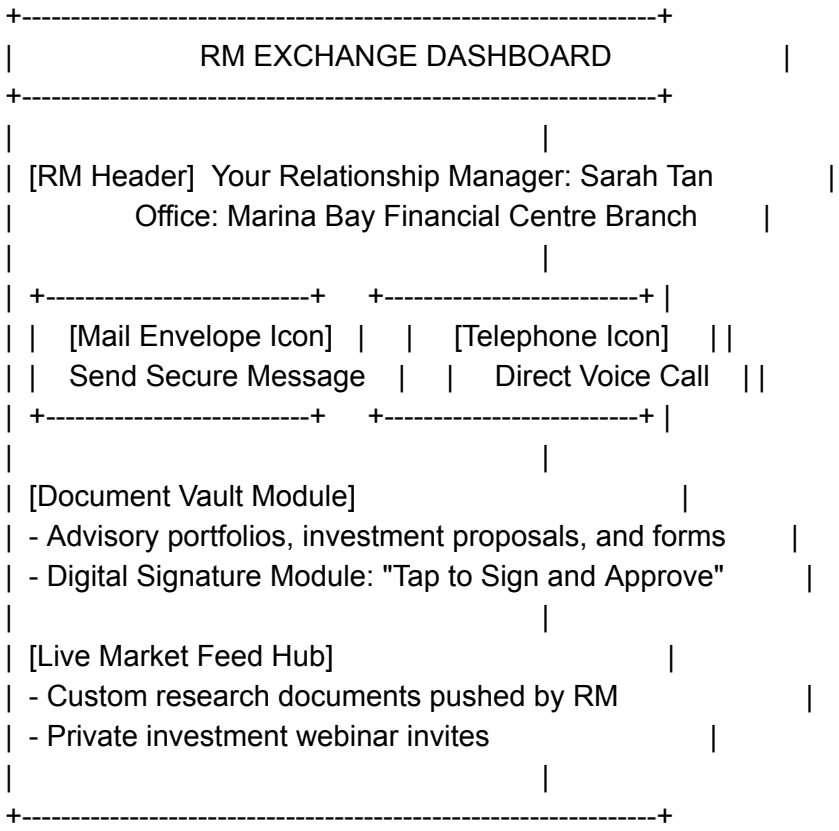

DBS Treasures and Wealth Management Ecosystem

The DBS Treasures digital architecture embeds global market trading, institutional research analysis, and wealth advisory services into a single digital platform[3].

Relationship Manager (RM) Integration and RM Exchange

The wealth platform integrates dedicated physical advisory support directly into the digital user interface[16].

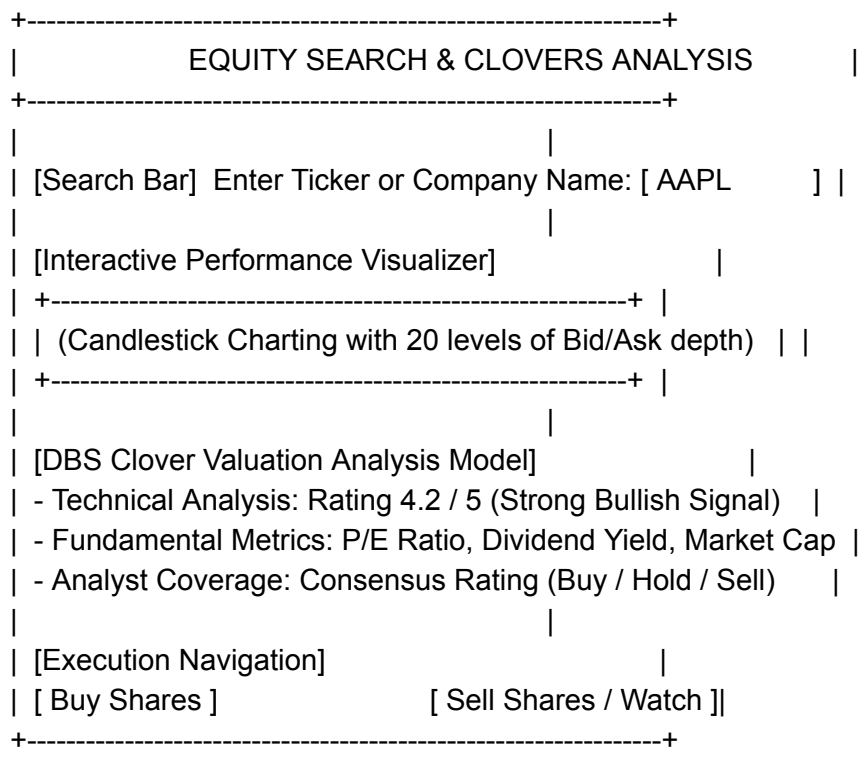

User Flow: Connecting with the Relationship Manager

1. **Secure Access:** The client logs into the **digibank mobile** app and taps the question mark (?) icon in the top header[16].
2. **Service Node Selection:** The user selects **Your Relationship Manager** from the help center menu[16].
3. **Advisory Workspace:** The interface displays the RM's profile card, complete with their photo, full name, and primary branch location[16].
4. **Communication Channel Routing:** The client chooses their preferred communication method:
   - *Direct Voice Connection:* Tapping the **Phone** icon initiates a call to the RM's secure office line[16].
   - *Encrypted Messaging:* Tapping the **Mail** icon opens a secure text window[16]. The user enters their message, attaches any documents, and taps **Submit** to route the query to the RM's secure terminal[40].

Online Equity Trading (OET)

The equity trading platform provides direct market access to eight major global exchanges: Singapore, Hong Kong, Mainland China (specifically Shanghai and Shenzhen A-Shares), the United States, Canada, Australia, Japan, and the United Kingdom[41].

User Flow: Placing an Equity Buy Order

1. **OET Navigation:** The Treasures client logs into the **digibank mobile** app, taps the **Invest** tab on the bottom bar, and selects **Equities**[8].
2. **Asset Lookup:** The user enters the company name or ticker symbol in the search bar[26].
3. **Research Analysis:** The stock overview page loads, featuring the **DBS Clover Model**—a visual tool that displays key technical signals, valuation multiples, consensus ratings, and historical charts[8].
4. **Execution Screen Access:** The user taps **Buy**[8].
5. **Trade Input Parameters:** The user defines the transaction details:
   - *Funding Account:* Selects their active Wealth Management Account (WMA)[41].
   - *Order Type:* Chooses from Market Order, Limit Order, or Stop Loss Order[18].

- *Order Quantity:* Inputs the number of shares. The platform supports odd lot sizes for the Hong Kong exchange[41].
- *Price Target:* Defines the limit price (if using limit orders)[18].

6. **Transaction Cost Review:** The user taps **Next** to review the trade ticket, which details the commission charges, local taxes, and estimated settlement totals[41].
7. **Execution:** Tapping **Submit Order** routes the trade to the market. Trade updates and executions are sent via push alerts in real time[11].

Online Funds Investing (OFI)

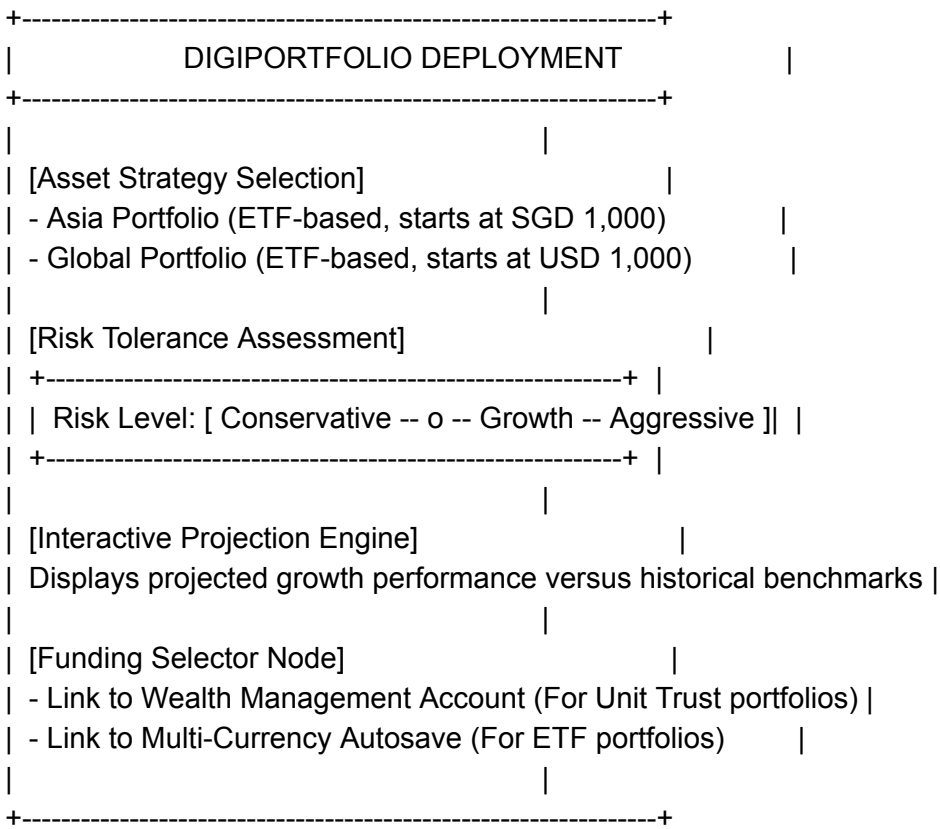

DBS iWealth lets users research and subscribe to over 250 mutual funds and unit trusts categorized by asset class, geography, and risk rating[7].

User Flow: Mutual Fund Purchase

1. **Access Path:** The user navigates to the **Invest** tab on the bottom menu and selects **Funds**[7].
2. **Curated Spotlight Browsing:** The user browses fund groupings, such as the **DBS Focus Funds**—a selection of high-conviction mutual funds aligned with the Chief Investment Office's market outlook[7].
3. **Filter Application:** The user applies filters to narrow the list by currency denomination, risk rating, asset type, or fund house[7].
4. **Factsheet and Performance Analysis:** Selecting a fund loads its profile page, detailing historical net asset values, top holdings, dividend yields, and its formal prospectus[7].
5. **Buy Trigger:** The user taps **Buy**[7].
6. **Regulatory Compliance Gate (CKA):** The system checks the user's Customer Knowledge Assessment (CKA) status[7]. If expired, the user is redirected to complete a digital questionnaire evaluating their knowledge of complex investment products before proceeding[7].
7. **Capital Funding Entry:** The user inputs their purchase amount and selects their funding source (cash accounts, CPF, or SRS balances)[2].
8. **Confirmation:** The user reviews the details and taps **Submit**[7]. Orders are processed within one working day, and formal settlement occurs within three to six business days[7].

Capital Allocation via digiPortfolio

digiPortfolio is a discretionary portfolio management service that combines DBS expert asset allocation with automated rebalancing algorithms[43]. These portfolios are built around specific investment objectives, such as regional ETF strategies, global unit trusts, or retirement-focused growth assets[43].

User Flow: digiPortfolio Setup and Customization

1. **Access Path:** The user logs in, navigates to **Invest** (mobile) or the **digiPortfolio** tab (web), and selects the portfolio tile[43].
2. **Strategy Selection:** The user selects their preferred strategy: **Asia Portfolio** (an ETF-based strategy with a regional focus starting at SGD 1,000) or **Global Portfolio** (an ETF-based strategy with a global focus starting at USD 1,000)[43].
3. **Risk Profile Modification:** The user adjusts an interactive slider to set their risk level[43]. The screen dynamically reconfigures to display the underlying holdings, historical volatility, and projected performance for the selected risk level[43].
4. **Initiate Setup:** The user clicks **I'm ready to invest**[43].
5. **Account Linking and Funding:** The user enters their investment amount and links their funding account[43]. (ETF-based portfolios can be funded from multi-currency accounts like My Account or Multiplier; funds-based portfolios must be funded through a registered Wealth Management Account)[43].
6. **Recurring Contribution Setup:** The user can toggle recurring monthly top-ups (minimum $100/month) to automate dollar-cost averaging[43].
7. **Verification and Submission:** The user reviews the fee disclosure (0.75% annual flat management fee), agrees to the investment terms, and taps **Submit**[43]. The investment

team processes the order, purchases the underlying assets, and displays the populated portfolio on the user's dashboard within three to five business days[43].

Accredited Investor Digital Asset (Cryptocurrency) Desk

Accredited Investors can access the DBS Digital Exchange directly through the mobile application to trade high-liquidity digital assets, including Bitcoin and Ethereum, with institutional-grade security[14].

User Flow: Crypto Account Setup and Trading

1. **Advisory Activation Request:** To open a cryptocurrency trading account, the user must contact their Relationship Manager[40]. The client logs into the app, taps the question mark (?) icon, selects **Your Relationship Manager**, and taps the **Envelope** icon[16].
2. **Advisory Verification:** The client drafts a secure message requesting access to the digital asset desk[40]. The Relationship Manager verifies the client's Accredited Investor credentials and activates the crypto-trading capabilities on their WMA[39].
3. **Accessing the Desk:** Once activated, the user logs into the **digibank mobile** app, navigates to the **Invest** menu, and selects **Cryptocurrency**[8].
4. **Order Entry Interface:** The user reviews the digital asset price feed and selects a token to trade[40].
5. **Parameter Definitions:** The user chooses their trading parameters:
   - *Transaction Sizing:* The system enforces a minimum trade size of USD 500 equivalent[40].
   - *Order Expiration:* The user selects either a **Day Limit Order** (valid until the close of the current trading session at 7:00 AM SGT the following day) or a **Good-Till-Date (GTD) Order** (valid for up to 30 days)[40].
6. **Submission:** The user reviews the transaction terms, clicks **Exchange Now**, and authorizes the trade using their Digital Token[40].

Trading Sessions and Matching States

Cryptocurrency trading on the DBS Digital Exchange follows a structured schedule throughout the day[40]:

- **Auction Phase (08:00 - 08:15 SGT):** Clients can submit, modify, or cancel limit orders[40]. Orders do not match during this phase, which allows the system to establish an opening price[40].
- **Trading Session (08:15 - 07:00 SGT next day):** The active trading session where the engine matches buy and sell orders in real time[40]. Clients can place, modify, or cancel orders freely[40].
- **System Maintenance (07:00 - 08:00 SGT daily):** The exchange is closed for clearing, settlement, and database maintenance[40].

Combined Currency Conversion and Time Deposits

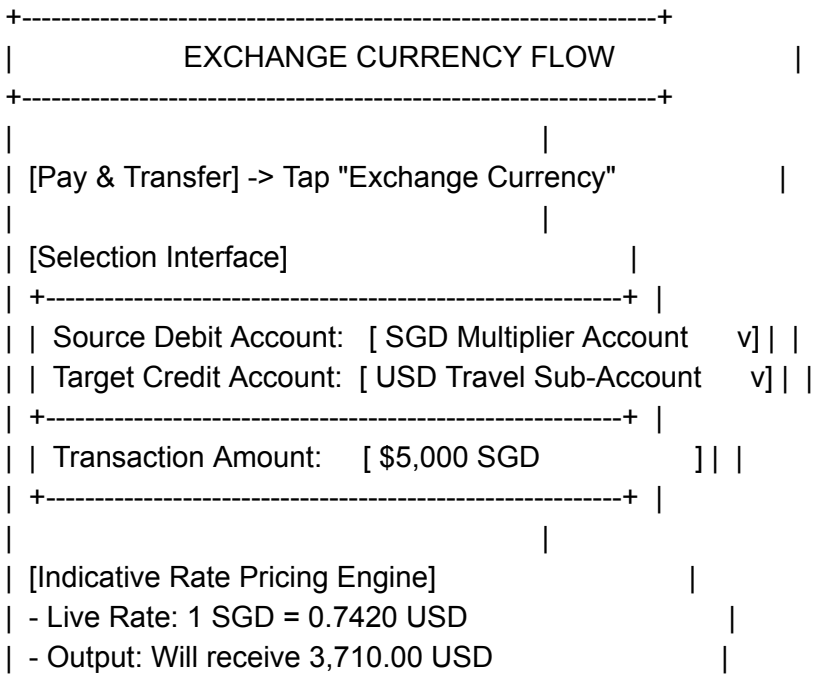

The wealth platform allows users to complete a joint currency conversion and place a high-yield time deposit in a single flow[46].

User Flow: Exchanging Currency and Placing a Time Deposit

1. **Access Path:** The user logs into the app, navigates to the **Save** module, and selects the **Exchange currency & Place a TD in one go** section[46].
2. **Dual-Currency Configuration:** The user selects their source debit account (e.g., SGD) and chooses a different currency for the target time deposit (e.g., USD or RMB)[46].
3. **Principal Allocation:** The user enters their deposit amount[46].
4. **Maturity Instructions:** The user selects their maturity instruction: *Renew Principal and Interest*, *Renew Principal Only*, or *Withdraw All Funds upon Maturity*[46].
5. **Receiving Account Designation:** If choosing to withdraw funds at maturity, the user selects a receiving account from their linked profiles[46].
6. **Verification and Submission:** Tapping **Next** displays the preferential exchange rate and interest rate for the time deposit[46]. The user verifies the details and taps **Place Now**[46].

Cross-Border Asset Operations and Limit Configurations

The multi-currency framework (supported by My Account and the Multiplier Account) gives users access to 12 foreign currencies alongside the Singapore dollar[22]. This system powers immediate exchange transactions, linked debit card travel wallets, and cross-border payments[22].

```
|                                                                |
|  [Authorization Gate] -> Click "Exchange Now" (No fees)        |
+----------------------------------------------------------------+
```

Overseas Remittance (DBS Remit)

DBS Remit allows users to transfer funds to over 150 countries in more than 20 currencies, with zero transaction fees and same-day delivery to select markets when submitted before local cut-off times[47].

Recipient Entry Requirements

To execute an overseas transfer, the user must first set up a verified recipient profile with several key details[50]:

- **Bank Sourcing Identifiers:** The recipient's full bank name and bank SWIFT/BIC code[6].
- **Account Sourcing Identifiers:** The verified bank account number or IBAN[6].
- **Recipient's Legal Identity:** The recipient's full legal name, matching their official bank records[6]. Nicknames or short-form names will cause clearance delays or transaction rejections[50]. For long names or corporate entities, users can use the *Full Address* field to input any overflow characters[50].
- **Residential and Bank Location:** The recipient's full street address, including city and country[6].

User Flow: Setting up an Overseas Recipient (Mobile App)

1. **Navigation:** The user logs in, taps the **Pay & Transfer** tab, and selects **Overseas**[50].
2. **Add Recipient Command:** The user taps **Add a recipient**[50].
3. **Geographical Target Definition:** The user selects the target country[51]. (For foreign currency transfers to other banks in Singapore, the user selects *Singapore* as the location)[51].
4. **Bank Details Entry:** The user enters the bank's SWIFT code and the recipient's bank account number[6].
5. **Personal Details Entry:** The user inputs the recipient's full name, residential address, and currency choice, then taps **Next**[6].
6. **Authorization:** The user reviews the details, taps **Add now**, and completes the digital token authentication to verify and save the new recipient[6].

User Flow: Executing an Immediate Overseas Transfer

1. **Access Path:** The user navigates to **Pay & Transfer** -> **Overseas** and selects a recipient from their saved list[50].
2. **Account and Amount Entry:** The user selects their source debit account, enters the transfer amount, and chooses the purpose of transfer[6].
3. **Fee Configuration:** The user selects who pays the transaction costs: *You pay the fees* (sender absorbs any intermediary costs) or *Recipient pays the fees* (intermediary fees are deducted from the transfer amount)[6].

4. **Verification and Submission:** Tapping **Next** displays the guaranteed exchange rate and total charges[6]. The user verifies the details and taps **Transfer now**[6]. The system processes the payment and generates a real-time tracking receipt[49].

User Flow: Scheduling a Recurring Overseas Transfer

1. **Access Path:** The user logs in, taps **Pay & Transfer**, and selects **Overseas**[48].
2. **Scheduling Option:** The user selects **Schedule Transfer** and taps **Schedule a new transfer**[48].
3. **Sourcing and Recipient Selection:** The user selects their funding account and chooses a recipient from their verified list[48].
4. **Transaction Value:** The user inputs the transfer amount and selects the purpose of transfer[48].
5. **Recurrence Parameters:** The user defines the schedule:
   - *Start Date:* Selects the execution date for the first transfer[48].
   - *Frequency:* Chooses the transfer interval (e.g., Weekly, Monthly, or Quarterly)[48].
   - *End Date:* The user can toggle **Set an end date** to define when the recurring instructions expire[48].
6. **Submission:** Tapping **Next** displays the transfer schedule details[48]. The user reviews the details and clicks **Schedule now** to authorize[48]. The transfer will execute automatically on each scheduled business day[48].

Core System Metrics and Fee Schedules

Standard banking operations—including local bank transfers, bill payments, and PayNow transactions—carry zero service fees across both web and mobile channels[36]. However, global market trading, foreign currency transfers, and wealth management services operate under specific fee structures[41].

The following tables summarize the operational limits, transaction fees, and market availability across both standard and wealth platforms[30].

Operational Limits Matrix

Transaction Category	Default Daily Limit	Minimum Configurable Limit	Maximum Configurable Limit	Operational Rules
DBS to DBS Transfer	S$3,000[30]	S$0	S$200,000[30]	Lowering limits applies instantly; increasing limits triggers a mandatory

				12-hour cooling-off period[30].
DBS to Other Banks	S$1,000[30]	S$0	S$200,000[30]	Governs standard local bank transfers, PayNow transactions, and Scan & Pay purchases[30].
Overseas Remittance	S$1,000[55]	S$500[55]	S$200,000[55]	Expressed as SGD equivalent[55]. Applies to global transfers via DBS Remit[55].
eNETS (d2pay)	S$0[56]	S$0	S$100,000[56]	Setting the limit to $0 deactivates the service; increasing the limit above $0 reactivates it immediately[53].
DBS PayLah! Wallet	S$999 (Non-digibank) [57]	S$0[57]	S$2,000[57]	Setting a S$0 wallet limit automatically auto-sweeps all incoming funds to the linked bank account[57].
Digital Asset Desk	N/A	USD 500 equivalent[40]	WMA Portfolio Cap	Minimum trade size per cryptocurrency

				transaction[40]. Restricted to Accredited Investors[40].

Equity Brokerage and Portfolio Management Fees

Investment Channel	Service Market	Online Trading Fee Rate	Minimum Transaction Cost	Prevailing Custody Fees
Online Equity Trading	Singapore	0.12% of trade volume[41]	No minimum charge[41]	Refer to the DBS Treasures Pricing Guide[41].
	United States	0.15% of trade volume[41]	USD 19.62[41]	Refer to the DBS Treasures Pricing Guide[41].
	Hong Kong	0.15% of trade volume[41]	HKD 87.20[41]	Refer to the DBS Treasures Pricing Guide[41].
	China A-Shares	0.25% of trade volume[41]	CNH 87.20[41]	Refer to the DBS Treasures Pricing Guide[41].
	Canada	0.25% of trade volume[41]	CAD 21.80[41]	Refer to the DBS Treasures Pricing Guide[41].
	United Kingdom	0.25% of trade volume[41]	GBP 21.80[41]	Refer to the DBS Treasures Pricing Guide[41].

	Australia	0.25% of trade volume[41]	AUD 21.80[41]	Refer to the DBS Treasures Pricing Guide[41].
	Japan	0.25% of trade volume[41]	JPY 2,180[41]	Refer to the DBS Treasures Pricing Guide[41].
digiPortfolio	All Portfolios	0.75% per annum[43]	Calculated daily based on NAV[43]	Zero front-end sales charges; zero switching or rebalancing fees[43].
